HRV scanner is an HRV biofeedback system (3D-animated biofeedback, real-time spectral analysis - on-line spectrum) and one HRV measuring station (standard test of HRV, such as RSA test [paced breathing, Deep Breathing test], short-term HRV, Ewing - and orthostatic test, long-term measurement).

In addition to the evaluation of automated quality assessment, extensive post-processing options available. Meaningful diagrams and illustrations, as well as many parameters (standard values for key are stored) can be a quick and meaningful interpretation of the measurement results. Comprehensive reporting system creates easy to understand reports for therapist and Family.

For users who want to do research, there is a study in HRV scanner module that enables the collection and processing of the study data effectively and clearly. Export functions as an interface to external applications (an statistics programs) facilitates the work.
