Sensitiv Imago

Hardware-software diagnostic equipment for full testing of human organism condition.

This equipment is based on young and dynamically developing bioresonance method. Sensitiv Imago allows to make a full organism checkup quickly and without any harm to a patient and to diagnosticate deviations and decrements of health status, risk of progression of diseases, detect helminths, bacteria, allergens, viruses that are present in the organism and other information (more about abilities). Also Sensitiv Imago equipment has other interesting functions like making individual healing preparations or therapeutic influence on a patient. You can read wider in Equipment module.
